

Dear Hiring Team at IFS,

I am excited to be applying for the Undergraduate Trainee Software Engineer position at IFS. With a passion for backend development and a strong programming foundation as a third-year undergraduate student of Computer Science, I look forward to joining your innovative team and growing as part of a global organization shaping the future through AI-powered solutions.

Although I am quite early in my career, I have gained experience through university projects and freelancing work involving Python and Java, more experience with Git as a version control method. I understand the importance of writing clean, tidy code as well as following best practices from beginning to end. I am equally capable of working with databases and SQL and working on the challenge of debugging and optimization of code.

What draws me most to IFS is your commitment to innovation, diversity, and real-world impact. Your focus on AI and sustainability aligns with my own interest in building solutions that are both technically sound and meaningful. I'm eager to collaborate with professionals at IFS, learn from experienced engineers, and contribute to impactful projects. As my lectures are mostly on weekends, I'm available full-time on weekdays and committed to making the most of this opportunity.

Thank you for your attention. I would be delighted to grow as a software engineer at IFS and assist in propelling your world vision.

Warm regards,

W.A.Hirushi Divyanjalie
